Aluminum Cooling Plates & Components

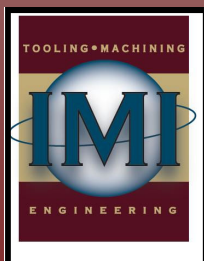

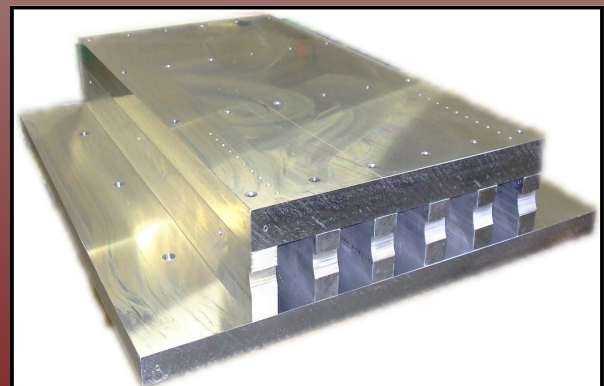

- DEEP HOLE GUN DRILLED PLATES
- TAPPED HOLES, BAFFLES AND PLUGS INSTALLED
- VACUUM PORTS AND MOUNTING HOLES
- LARGE RANGE OF SIZES
- BUILT TO YOUR SPECIFICATIONS
- STRIKE PLATES, MANIFOLDS AND OTHER COMPONENTS

A single mold cavity or multiple cavities are mounted on the cooling plate (*water cooled mold base*) to provide proper cooling and faster cycle times. The plates may also be interchangeable to run multiple mold cavities in alternating cycles or reused for another set of cavities after a mold has run its course. The cooling plates have gun drilled

water lines, tapped with plugs and baffles installed, machined and tapped mounting holes and vacuum ports. In house capabilities allow us to accommodate a large range of sizes. We can build your cooling plates to your specifications. Additional items can be included so the plate is complete when the customer receives it.
